EXPLANATION OF THE MULTI CHANNEL COMBINER SPECIFICATIONS

Calculation of the maximum permissible output voltage

Various signals are added up within the combiner.

The peak voltages of the individual signal must be calculated and added up. The peak voltage must not be calculated from the combined power because this will result in a too low figure.

This sum must be less than the noted maximum output voltage. SPINNER recommends to keep a safety margin of 20%.

Calculation of the maximum permissible power at the narrow band inputs of starpoint, manifold or CIB combiner

The power is limited by the filters. The power ratings in the catalogue are always RMS figures. If the RMS figure of a signal is different from the nominal figure a correction factors must be applied (e.g. an analogue TX with 10/1 kW nominal power produces only 7 kW RMS power).

The RMS power specified in the data sheet can be applied. Only for adjacent channel operation a reduction may be necessary as explained below.

Calculation of the maximum permissible power at the wide band input of CIB combiners

The power ratings in the catalogue are always RMS figures. If the RMS figure of a signal is different from the nominal figure then correction factors must be applied (e.g. an analogue TX with 10/1 kW nominal power produces only 7 kW RMS power).

Typically the powers fed into the combiner inputs are different:

- only one transmitter is fed into the narrow band input
- the combined power of several transmitters is fed into the wide band input

In order to check if a CIB combiner model is suitable you must subtract 50% of the narrow band power from the maximum wide band power noted in the data sheet.

If the remainder is too small you must select a bigger combiner model.

Example:

Power at narrow band input in kW: ≤ 4.0

Power at wide band input in kW: ≤ 7.0

Possible combinations:

Narrow band input in kW: 0 1.0 2.0 3.0 4.0

Wide band input in kW: 7.0 6.5 6.0 5.5 5.0

SPINNER recommends to keep a safety margin of 20%.

Adjacent channel operation with CIB-Combiners

Only CIB combiners are suitable to combine adjacent channels or blocks.

The slope of the adjacent channel fed into the wide band input is not completely reflected by the band pass filters. A small part of the signal enters the filter and is converted to heat. This effect is called adjacent channel loss.

This load onto the band pass filters must be taken into account. For compensation the maximum permissible narrow band power must be reduced by 10 % - 30 % of the adjacent channel power fed into the wide band input.

Matching of CIB combiners outside the operating channels

To achieve best matching for the operating channels, non-used channels are handicapped. Therefore, please specify in the order all planned operating frequencies. The VSWR noted in the data sheet is guaranteed only for one channel per input.

Tuning specifications for filters and combiners

The filters must be tuned to the proper channel bandwidth (6, 7 or 8 MHz) and to satisfy the mask requirements.

The necessary information is defined in the tuning specifications (e.g. AS6148) which must be indicated with every order.

In the catalogue you can find filter data for the most common applications. However, alternative filter tunings can be made for other mask requirements, applications and bandwidths. Please do not hesitate to contact us.

BAND 3 COMBINERS

BAND 3 STRETCH LINE COMBINERS

Part number	Inputs	Channel spacing	Filters	Power per Input	Mask filtering
BN 57 46 81	2	≥ 2	–	≤ 2 kW	–

BAND 3 CIB COMBINERS WITHOUT MASK FILTERING

¹⁾ Attention: The power at the **Wide Band** input must be reduced by 50 % of the power fed into the **Narrow Band** input

²⁾ Attention: The output power must not be exceeded

CHANNEL COMBINERS

Multi channel combiners

In order to broadcast more transmitters via a common antenna it is necessary to connect the transmitter outputs via a combiner in such a way that they do not interfere (isolation) and to guide the whole RF power to the antenna (insertion loss). Band pass filters or phase adjusted transmission lines are used in the combiners as frequency determining devices.

The band pass filters can additionally be used to suppress spurious emissions (integrated mask filtering for DTV, DAB, T-DMB, ...).

Starpoint or manifold combiners

The transmitters can be isolated from each other by connecting a band pass filter to every output. The outputs of these filters must be connected via a proper matching network to achieve good matching for the operating channels. This system will show total mismatch outside the operating channels because of the total reflection at the band pass filters.

Frequency changes or extensions are difficult with such combiners, because the matching networks must be optimized to the new frequencies.

Constant Impedance Broadband (CIB) combiners

Good isolation, broadband matching and ease of modifications are achieved in the CIB combiner by a tricky combination of band pass filters and 3 dB couplers.

The signal applied to the narrow band input is fed via the narrow band 3 dB coupler into the two band pass filters and is combined afterwards in the wide band 3 dB coupler and routed to the antenna output.

The signals fed into the wide band input go to the filter ports via the wide band 3 dB coupler where they are totally reflected back to the wide band coupler and routed to the antenna output.

All ports are broadband matched (Constant Impedance Broadband).

Any transmitter signal can be fed into the wide band input as long as the frequency spacing to the pass band range of the filters is big enough to get total reflection. Even adjacent channels can be combined if the slopes of the filter curves are steep enough.

The CIB combiners are preferred components for the design of multi channel combiners because they offer most flexibility for any configuration of channels and powers.

CHANNEL COMBINERS

Stretch line combiners

The difference in wave length of the transmitter frequencies is used with the stretch line combiner. The signals are split by the first 3 dB coupler to two transmission lines. The phases at the input of the second 3 dB coupler are modified by careful adjustment of the line lengths in such a way that all signals are routed to the antenna output.

The stretch line combiner has very low insertion loss and high power rating but can combine only channels with more than 3 channels spacing.

Combination of several combiners

CIB combiners may be cascaded nearly arbitrarily. Additional units can be connected to the wide band input or the output. Starpoint, manifold or stretch line combiners may be connected to the wide band input of CIB combiners to add further channels.

chain of CIB combiners

manifold and CIB combiner

stretch line and CIB combiner

How to select the proper combiner?

Start by making a list of channels, powers and mask requirements:

Channel	Power	Mask requirement
23	2 kW	DVB
27	2 kW	DVB
28	10 kW	no
57	1 kW	DVB

If the list contains adjacent channels they must be combined using CIB combiners.

If mask filters are necessary it is preferable to integrate them into the starpoint or manifold or CIB combiners because this gives the benefit of minimum overall insertion loss and maximum freedom for channel combinations.

Stretch line combiners and the wide band input of CIB combiners do not provide mask filtering. Therefore, proper band pass filters must be connected to the inputs to satisfy the mask requirements.

After selecting the combiner design (CIB or star point or manifold or stretch line) you must select a model with sufficient power rating.

The combiner engineers from SPINNER will be pleased to support you with the selection and planning of combiner systems. Please send the table with channels and specifications to: info@spinner-group.com

SOLUTIONS FOR LOW AND MEDIUM POWER COMBINERS

SPINNER offers a complete range of low and medium power combiners:

- 1 W up to 5 kW
- Band 3, UHF and Band L
- ATV, DAB and DTV

All designs are available:

- stretch line combiners without mask filtering
- starpoint combiners made of DAB and DTV mask filters
- manifold combiners with and without DTV mask filtering
- CIB combiners with and without DAB or DTV mask filtering

The compact combiners can be installed:

- inside 19" racks
- wall mount
- floor mount

Multiple combiner units can be stacked vertically inside a 19" rack or self supporting or be fixed with wall mounts to minimize foot print.

The 19" slide-in combiners are available in three versions:

- BN 57____ without front plate
- BN 57____C0001 with front plate, RF ports at the front side
- BN 57____C0002 with front plate, RF ports at the rear side

All SPINNER combiner systems consisting of multiple units are assembled, tuned and measured in the factory before shipping. SPINNER is shipping complete systems which can be easily installed by any skilled installer.

Thus the customer gets complete test results of insertion loss, mask filtering and matching which can be checked before starting the installation and compared afterwards with the on site results.

Double UHF 6-way combiner
with integrated DVB mask filters

SOLUTIONS FOR COMPACT COMBINING & SWITCHING SYSTEM 1 KW - 80 KW

Modular system of combiners and patch panels to implement all functions with minimum foot print

SPINNER has standardized and minimized the combiners and patch panels so much that a half square meter footprint per channel is sufficient to realize the combination, mask filtering and many switching functions. This design is called **CCS** and has many advantages:

- The combiner planning is very simple because only 0.5 m² are sufficient per channel.
- The DTV mask filtering (uncritical or critical) can be integrated into the **CCS** combiner module without increasing the foot print.
- **CCS** combiner modules are available for up to 80 kW combined power in one output. For higher powers parallel, phase equalized combiner chains can be made.
- **CCS** systems can be equipped with monitoring couplers, trimming lines and other accessories.
- The installation is very simple because the **CCS** modules are delivered as individual units which can be handled easily. On site the combiner modules only need to be fixed to the bottom frame and connected with the prefabricated rigid lines to be ready for operation. Thus, even complicated combiner systems can be installed within one day.
- The installation of the interconnection lines to the transmitters and the antenna is simple, quick and cheap because all RF ports are free upwards. So one vertical piece of rigid line is sufficient per port.
- The optional **CCS** patch panels allow reserve operation facilities, bypassing of individual combiner modules, switching to a common dummy load and precise measurement of the combiner performance without dismantling rigid lines.
- The off-air periods for frequency changes and other modifications can be reduced to minutes if **CCS** patch panels are used.
- The standardization even allows the replacement of combiner modules for later changes to adjacent channel operation or increases of transmitter power.

The SPINNER **CCS** systems offers the network operator enormous advantages in planning, installation, operation and future expansion which should be taken into account in comparison with the competition.

SOLUTIONS FOR COMPACT COMBINING & SWITCHING SYSTEM 1 KW - 80 KW

Mehrsenderweichen
Multi Channel Combiners

SOLUTIONS FOR COMPACT COMBINING & SWITCHING SYSTEM 1 KW - 80 KW

CCS combiner system without patch panels - minimum configuration

For a straightforward system the combiner modules can be connected via simple rigid lines. Such a system is very efficient but any measurements or modification will require interruption of transmission.

CCS combiner system with combiner bypass patch panels for increased availability

To increase the availability of the combiner system every combiner module is equipped with a 4 port patch panel in such a way that any combiner can be bypassed within minutes to be free for measurements or frequency changes.

The transmission of the remaining channels can continue within minutes and even the bypassed channel can be transmitted by feeding it into the free wide band input.

SOLUTIONS FOR COMPACT COMBINING & SWITCHING SYSTEM 1 KW - 80 KW

CCS combiner system with transmitter routing and combiner bypassing patch panels for maximum flexibility

For maximum flexibility the combiner module can be equipped with 4 port patch panels at the input and the output side:

Transmitter routing at the input side:

- For normal operation the transmitter is directly connected to the combiner input.
- For measurements the transmitter signal can be switched to a common dummy load.
- For frequency changes the transmitter can be switched to the wide band input of the combiner system to continue operation while the combiner unit is retuned.

Combiner bypassing at the output side:

- For normal operation the module is in the combiner chain.
- For measurements or frequency changes the combiner module is bypassed and isolated.

SOLUTIONS FOR COMPACT COMBINING & SWITCHING SYSTEM 1 KW - 80 KW

Single UHF CIB combiner unit

**BN 57 54 02 Rennes, France**

UHF combiner for 8 x 5.6 kW DVB
with integrated mask filters and monitoring couplers

**BN 57 53 06 Turkmenistan**

UHF combiner for 8 x 4 kW DVB with integrated mask filters, combiner bypass
and antenna patch panel with bent front for installation in circular transmitter hall

front side

rear side

BN 57 52 65 Argentina

UHF combiner for 4 x 2 kW ISDB-T
(expandable to 8 x 2 kW) with integrated
8 cavity mask filter and N+1 switching
and dummy load for testing

SOLUTIONS FOR COMPACT COMBINING & SWITCHING SYSTEM 1 kW - 80 kW

front side

rear side

BN 57 54 96 Russia

UHF Combiner for 5 kW DVB with integrated mask filters and 20 kW ATV, combiner bypass and antenna patch panel and 10 kW dummy load

**BN 57 56 26 Pfänder, Austria**

Band 3 combiner for 5 x 2.5 kW DAB (expandable to 10 x 2.5 kW DAB) with integrated mask filters and antenna patch panel

**BN 57 56 37 South Africa**

UHF combiner for 3 x 3 kW DVB with integrated liquid cooled filters

**BN 57 50 84 Pontop Pike, England**

UHF combiner for 3 x 15 kW DVB with integrated liquid cooled filters, input isolation U-links and pump unit

**BN 57 44 72 Knockmore, Scotland**

Double UHF combiner for 6 x 1.7 kW DVB with integrated 8 MHz DVB mask filters 2 port input isolation patch panel

DESIGN AND OFFERS

A lot of knowledge and experience is necessary to design multichannel combiner systems with good technical and economical performance. The following aspects must be taken into account:

- power of the individual signals
- voltage of the individual signals
- frequency spacings (adjacent channels)
- requirements for mask filtering
- patch panels for emergency operation
- space consumption
- future frequency changes or extensions
- performance of combiners, patch panels, etc.

For the design of a complete transmitting station the specifications of the combiner system (insertion losses, matching) must be fixed in the planning stage.

SPINNER has a team of experienced RF engineers to design combiner systems.

Please send us your requirements. We will prepare an offer with detailed technical and mechanical specifications similar to the data sheet at the right page.

The complete combiners system is shown in the picture below.

Example:

UHF-Combiner for 3 x 5 kW DVB
for adjacent channel operation
with integrated 8 MHz DVB mask filters
4 port combiner bypass patch panels
4 port TX rerouting patch panels
6 port half antenna patch panel

- **CCS** compact design
- for 1.54 MHz block width
- integrated mask filters for DAB and T-DMB
- adjacent block operation
- temperature compensated
- filters with cross coupling (notch function)
- liquid cooled filter

BN 57 49 92

BN 57 46 90

Part number	BN 57 49 92 natural cooling	BN 57 46 91 liquid cooling	BN 57 46 90 natural cooling
Frequency range	170 - 240 MHz		
Block spacing	≥ 0		
Narrow band input	1 5/8" EIA		
Filter type integrated cavities/size	6/200 ≡ BN 617108		
Temperature stability	≤ 2 kHz / K		
Harmonics attenuation	≥ 50 dB for f ≤ 500 MHz		
DAB and T-DMB Mask filtering	DAB / T-DMB @ 1.54 MHz ($\dot{U}/U_{rms}=13$ dB)		
Average input power The input power of liquid cooled filters must be reduced if installed more than 500 m above sea level.	≤ 6 kW	≤ 10.2 kW @ 0 - 500 m ≤ 9.0 kW @ 1400 m ≤ 8.0 kW @ 2100 m ≤ 7.0 kW @ 2800 m ≤ 6.0 kW @ 3600 m	≤ 6 kW
Tuning instruction	AS6019		AS6087
Insertion loss & Mask filtering (alternative tuning on request)	f_0 ≤ 0.65 dB $f_0 \pm 0.77$ MHz ≤ 1.30 dB $f_0 \pm 0.97$ MHz ≥ 12 dB $f_0 \pm 1.15$ MHz ≥ 30 dB $f_0 \pm 1.75$ MHz ≥ 40 dB $f_0 \pm 2.20$ MHz ≥ 55 dB $f_0 \pm 3.00$ MHz ≥ 55 dB		f_0 ≤ 0.6 dB $f_0 \pm 0.77$ MHz ≤ 1.4 dB $f_0 \pm 0.97$ MHz ≥ 15 dB $f_0 \pm 1.15$ MHz n.d. $f_0 \pm 1.75$ MHz ≥ 45 dB $f_0 \pm 2.20$ MHz ≥ 50 dB $f_0 \pm 3.00$ MHz ≥ 50 dB
Group delay variation	$\Delta\tau$ ≤ 1000 ns		$\Delta\tau$ ≤ 1200 ns
Wide band input	1 5/8" EIA		3 1/8" EIA male
Average input power	≤ 14 kW		≤ 30 kW
Mask filtering	Attention: The power at the wide band input must be reduced by 50 % of the power fed into the narrow band input		no
Insertion loss	≤ 0.1 dB (non adjacent)		
Output	1 5/8" EIA		3 1/8" EIA male
Peak output voltage	≤ 7.7 kV		≤ 12.7 kV
Isolation between inputs	≥ 35 dB		
VSWR	≤ 1.1		
Dimensions (L x W x H) mm	≈ 925 x 520 x 1420		
Weight	≈ 200 kg		
Environmental conditions	for limitations see „Environmental Conditions for Broadcast Products“		

BAND 3 DAB CIB COMBINERS

	f ₀ ± 1.75 MHz	≥ 50 dB	f ₀ ± 1.75 MHz	≥ 61 dB
	f ₀ ± 2.20 MHz	≥ 65 dB	f ₀ ± 2.20 MHz	≥ 67 dB
	f ₀ ± 3.00 MHz	≥ 65 dB	f ₀ ± 3.00 MHz	≥ 70 dB
Group delay variation	Δτ ≤ 1200 ns		Δτ ≤ 1300 ns	
Wide band input	1 5/8" EIA		3 1/8" EIA male	
Average input power	≤ 14 kW Attention: The power at the wide band input must be reduced by 50 % of the power fed into the narrow band input		≤ 30 kW	
Mask filtering	no			
Insertion loss	≤ 0.1 dB (non adjacent)			
Output	1 5/8" EIA		3 1/8" EIA male	
Peak output voltage	≤ 7.7 kV		≤ 12.7 kV	
Isolation between inputs	≥ 35 dB			
VSWR	≤ 1.1			
Dimensions (L x W x H) mm	≈ 1200 x 520 x 1420			
Weight	≈ 240 kg			
Environmental conditions	for limitations see „Environmental Conditions for Broadcast Products“			

BAND 3 DTV STARPOINT COMBINERS

- compact design as 19" slide-in unit
- for 6, 7 and 8 MHz channel bandwidth
- integrated mask filters for DTV
- temperature compensated
- filters with cross coupling (notch function)
- tuneable within the whole band 3

Typical design

Part number	BN 57 46 69		
Frequency range	174 - 230 MHz		
Block spacing	≥ 1		
Narrow band inputs	7-16 female		
Filter type integrated cavities/size	6/100 $\equiv$ BN 61 71 90		
Temperature stability	≤ 2 kHz / K		
Harmonics attenuation	≥ 50 dB for $f \leq 500$ MHz		
Mask filtering	DVB-T @ 8 MHz ($\dot{U}/U_{rms}=13$ dB)	DVB-T @ 7 MHz ($\dot{U}/U_{rms}=13$ dB)	ATSC @ 6 MHz ($\dot{U}/U_{rms}=11$ dB)
Average input power	≤ 1.1 kW	≤ 1.0 kW	≤ 900 W
Tuning instruction	AS6164	AS6162	AS6161
Insertion loss & Mask filtering (alternative tuning on request)	$f_0 \leq 0.35$ dB $f_0 \pm 3.805 \leq 0.75$ dB $f_0 \pm 4.200 \geq 4.0$ dB $f_0 \pm 6.000 \geq 20$ dB $f_0 \pm 12.00 \geq 55$ dB	$f_0 \leq 0.35$ dB $f_0 \pm 3.35 \leq 0.80$ dB $f_0 \pm 3.50 \geq 1.2$ dB $f_0 \pm 3.65 \geq 4.0$ dB $f_0 \pm 5.00 \geq 20$ dB $f_0 \pm 12.0 \geq 55$ dB	$f_0 \leq 0.40$ dB $f_0 \pm 2.69 \leq 0.60$ dB $f_0 \pm 3.00 \geq 1.2$ dB $f_0 \pm 3.50 \geq 8.0$ dB $f_0 \pm 4.00 \geq 15$ dB $f_0 \pm 6.00 \geq 30$ dB $f_0 \pm 9.00 \geq 64$ dB
Group delay variation	$\Delta\tau \leq 350$ ns	$\Delta\tau \leq 350$ ns	$\Delta\tau \leq 220$ ns
Output	7-16 female		
Isolation between inputs	≥ 35 dB		
VSWR	≤ 1.2		
Dimensions (L x W x H) mm	689 x 448 x 510		
Weight	≈ 55 kg		
Environmental conditions	for limitations see „Environmental Conditions for Broadcast Products“		

BAND 3 DTV CIB COMBINERS

- compact design
- for 6, 7 and 8 MHz channel bandwidth
- integrated mask filters for DTV
- adjacent channel operation
- temperature compensated
- filters with cross coupling (notch function)
- tuneable within the whole band 3

Part number	BN 57 46 68		
Frequency range	174 - 230 MHz		
Block spacing	≥ 0		
Narrow band input	7-16 female		
Filter type integrated cavities/size	6/100 ≡ BN 61 71 90		
Temperature stability	≤ 2 kHz / K		
Harmonics attenuation	≥ 50 dB for f ≤ 500 MHz		
Mask filtering	DVB-T @ 8 MHz ($\dot{U}/U_{rms}=13$ dB)	DVB-T @ 7 MHz ($\dot{U}/U_{rms}=13$ dB)	ATSC @ 6 MHz ($\dot{U}/U_{rms}=11$ dB)
Average input power	≤ 2.2 kW	≤ 2.0 kW	≤ 1.8 kW
Tuning instruction	AS6164	AS6162	AS6161
Insertion loss & Mask filtering (alternative tuning on request)	f_0 ≤ 0.35 dB $f_0 \pm 3.805$ ≤ 0.75 dB $f_0 \pm 4.200$ ≥ 4.0 dB $f_0 \pm 6.000$ ≥ 20 dB $f_0 \pm 12.00$ ≥ 55 dB	f_0 ≤ 0.35 dB $f_0 \pm 3.35$ ≤ 0.80 dB $f_0 \pm 3.50$ ≥ 1.3 dB $f_0 \pm 3.65$ ≥ 4.0 dB $f_0 \pm 5.00$ ≥ 20 dB $f_0 \pm 12.0$ ≥ 55 dB	f_0 ≤ 0.40 dB $f_0 \pm 2.69$ ≤ 0.60 dB $f_0 \pm 3.00$ ≥ 1.2 dB $f_0 \pm 3.50$ ≥ 8.0 dB $f_0 \pm 4.00$ ≥ 15 dB $f_0 \pm 6.00$ ≥ 30 dB $f_0 \pm 9.00$ ≥ 64 dB
Group delay variation	$\Delta\tau \leq 350$ ns	$\Delta\tau \leq 350$ ns	$\Delta\tau \leq 220$ ns
Wide band input	7-16 female		
Average input power	≤ 3 kW Attention: The power at the wide band input must be reduced by 50 % of the power fed into the narrow band input		
DTV Mask filtering	no		
Insertion loss	≤ 0.1 dB (non adjacent)		
Output	7-16 female		
Peak output voltage	≤ 3.2 kV		
Isolation between inputs	≥ 35 dB		
VSWR	≤ 1.1		
Dimensions (L x W x H) mm	≈ 690 x 460 x 560		
Weight	≈ 64 kg		
Environmental conditions	for limitations see „Environmental Conditions for Broadcast Products“		

BAND 3 DTV CIB COMBINERS

Output	3 1/8" EIA male			4 1/2" EIA male			52-120 BT male		
Peak output voltage	≤ 12.5 kV			≤ 15.5 kV			≤ 19.5 kV		
Isolation between inputs	≥ 35 dB								
VSWR (one WB channel)	≤ 1.06								
Dimensions (L x W x H) mm	900 x 480 x 1200			900 x 480 x 1200			900 x 520 x 1400		
Weight	≈ 170 kg			≈ 180 kg			≈ 235 kg		
Environmental conditions	for limitations see „Environmental Conditions for Broadcast Products“								

CCS UHF CIB COMBINERS

- **CCS** compact design
- integrated mask filters for DTV
- adjacent channel operation
- for 6, 7 and 8 MHz channel bandwidth
- temperature compensated
- tuneable within the whole UHF range

BN 57 55 30 A0080
